Art Unit: 2874

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-25 and 50-80, drawn to a fiber optic module with a pull-actuator and method of making, classified in class 385, subclass 53.
- II. Claims 26-35, drawn to a pull actuator for fiber optic modules, classified in class 385, subclass 134.
- III. Claims 36-40, drawn to a pivot arm actuator for fiber optic modules, classified in class 385, subclass 134.
- IV. Claims 41-49, drawn to a pull de-latching mechanism for fiber optic modules, classified in class 385, subclass 134.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because in a fiber optic module with a pull actuator, a pull actuator of any type would be able to perform the task. It does not have to specifically be the pull actuator in Group II. The subcombination has separate utility such as an optical fiber module connector or in mechanical surgical devices.

Inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the

subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because in a fiber optic module with a pivot arm actuator, a pivot arm actuator of any type would be able to perform the task. The subcombination has separate utility such as for use in power wrenches and outboard motors.

Inventions I and IV are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because in a fiber optic module with a pull de-latching mechanism, a pull de-latching mechanism of any type would be able to perform the task. . The subcombination has separate utility such as push button release devices such as a splint assembly.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group III, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group IV, restriction for examination purposes as indicated is proper.

Art Unit: 2874

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
